

Hip & Ridge 12

RIDGE CAP SHINGLES

A quick, easy and attractive way to protect the vulnerable hip and ridge areas of the roof.

Hip & Ridge 12

RIDGE CAP SHINGLES

Now you don't have to waste time cutting up shingles to protect those vulnerable hip and ridge areas.

IKO has a better-looking, much easier alternative! Introducing IKO's Hip & Ridge 12.

Until now, you've had to separate our perforated shingle strips into individual cap pieces, then trim them on an angle before you could properly install them to protect those vulnerable hip and ridge areas. It can take a lot of time, waste material and really slow the job down.

Once the Hip & Ridge 12 "pre-tapered" format pieces have been separated at the perforations, your installer can start applying them immediately. No more cutting on-site.

This little change makes a BIG difference. Here's why:

- **It's quicker. Less time means more money in your pocket!**

Lightweight and perforated with a pre-cut tapered headlap to give you 3 perfectly sized pieces, each 12" (300 mm) wide. By spending less time cutting, you'll save on labor costs. Now you can improve the roofline and your bottom line!

- **It's safer. Everyone benefits from a tidier job site!**

Because the pieces are pre-trimmed, your installers won't be slipping or tripping over cut scraps of shingle. Homeowners will appreciate a cleaner job site, too. Plus, a bundle of our new Hip & Ridge 12 weighs almost 5 lb less than the current format, so it's lighter to carry up to the roof and easier to handle.

- **It looks better. Get great-looking results every time, in less time!**

No more uneven cuts. Because these cap shingles are pre-tapered, your installers will be able to follow straighter application lines more consistently. If the profile requires dimensional depth, simply use a double layer, as before.

Perforated pieces can be more easily separated when the shingles are cooler, so on hot days, separate the pieces early in the morning.

Installation Instructions

- Separate Hip & Ridge 12 shingles into thirds, using the perforation marks as a guide (see Diagram 1).
- These shingles are designed for a 5-1/8" (130 mm) exposure. (For a neater appearance, the top of each side of each piece has been factory trimmed on a 1" (25 mm) taper (see Diagram 2)).
- Bend each piece over the hip or ridge, and nail 5-3/4" (146 mm) above the butt edge, 1" (25 mm) in from each edge, exposing each piece 5-1/8" (130 mm).
- Apply hip pieces starting at the lower end of the hip, working up toward the ridge. On hip roofs, apply ridge pieces starting at each end, meeting in the middle.
- On gable roofs, apply ridge pieces starting at the end opposite to the prevailing wind direction and continue to the other end.

Note: To obtain a three-dimensional effect, (which is recommended, but not required), apply hip and ridge shingles double thickness by stacking 2 pieces on top of one another, the lower piece extending about 3/4" (19 mm) further than the top piece (see Diagram 2).

- The final shingle should be set in cement, and the exposed nail heads of the final shingle should be covered with cement.

Diagram #1

SPECIFICATIONS	
Length	36" (914 mm)
Width	12-1/4" (311 mm)
Quantity per bundle	26 x 3 = 78
Coverage per bundle	33.3 lin. ft. (10.1 lin. m)

Diagram #2

Miami-Dade approved. NOA # 11-1121.01 for product made in Brampton or Toronto. Expiry date 05/19/16.

Note: All values shown are approximate.

Available in colors that match our most popular Cambridge Collection, Royal Estate, Armourshake, and Crowne Slate Architectural shingles!
